

# FEATHER DIESEL DPF CLEANING

## DPF Cleaning

Feather Diesel Services (FDS) are now authorised by Hartridge UK and FSX America to test and clean DPF units fitted to car/van/truck/bus/off-highway vehicles.

Modern diesel vehicles, by law, are now fitted with a DPF in the exhaust system to stop harmful particulates passing into the atmosphere. Over time however, these can become blocked leading to warning lights on the dashboard and/or reduced performance.

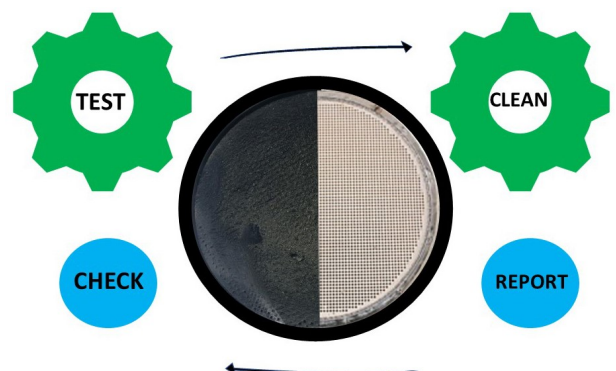

If a forced regeneration (on the vehicle) fails to clear the DPF and remove the dashboard light it may be time to remove the DPF unit for analysis. At this point please contact Feather Diesel to discuss cleaning options.

In order to meet the highest environmental standards, our cleaning process primarily uses compressed air and a specialist DPF kiln.

Our experience tells us that regular service cleaning of your DPF unit could save you thousands on replacement costs and vehicle downtime.

# FEATHER DIESEL DPF CLEANING

## DPF Cleaning

Blocking of a DPF unit can be caused by one or more of the following;

- Incorrect oil
- In-operative vapouriser
- Poorly operating heater plugs
- Faulty/tired injectors
- Worn engine
- Driving style and driving cycle of the vehicle
- Poor quality fuel
- Faulty EGR
- Faulty temperature sensors

To discuss any of the above symptoms please speak with one of our Garage Technicians.

Helps **maximise** the life of the filter and reduces your operating costs!

Ensures maximum exhaust flow

Air based, no fluids required

Environmentally friendly, cost effective alternative to existing wet-based cleaning

Available to car, van, bus, truck & plant operators

Helps to maintain optimum fuel economy
